1. Introduction

The Software Design Document is a document to provide documentation which will be used to aid in software development by providing the details for how the software should be built. Within the Software Design Document is narrative and graphical documentation of the software design for the project including ER Diagrams, Conceptual Schema, and other supporting requirement information.

1.1 Purpose

The purpose of the Software Design Document is to provide a description of the design of a system fully enough to allow for software development to proceed with an understanding of what is to be built and how it is expected to build. The Software Design Document provides information necessary to provide the description of the details for the software and system to be built.

1.2 Objective

- To deal with Hostel Management System in an easy and an efficient manner.
- Create strong and secure database that allows for any connection in a secure way, to prevent any outside or inside attacks.

1.3 Scope of the Project

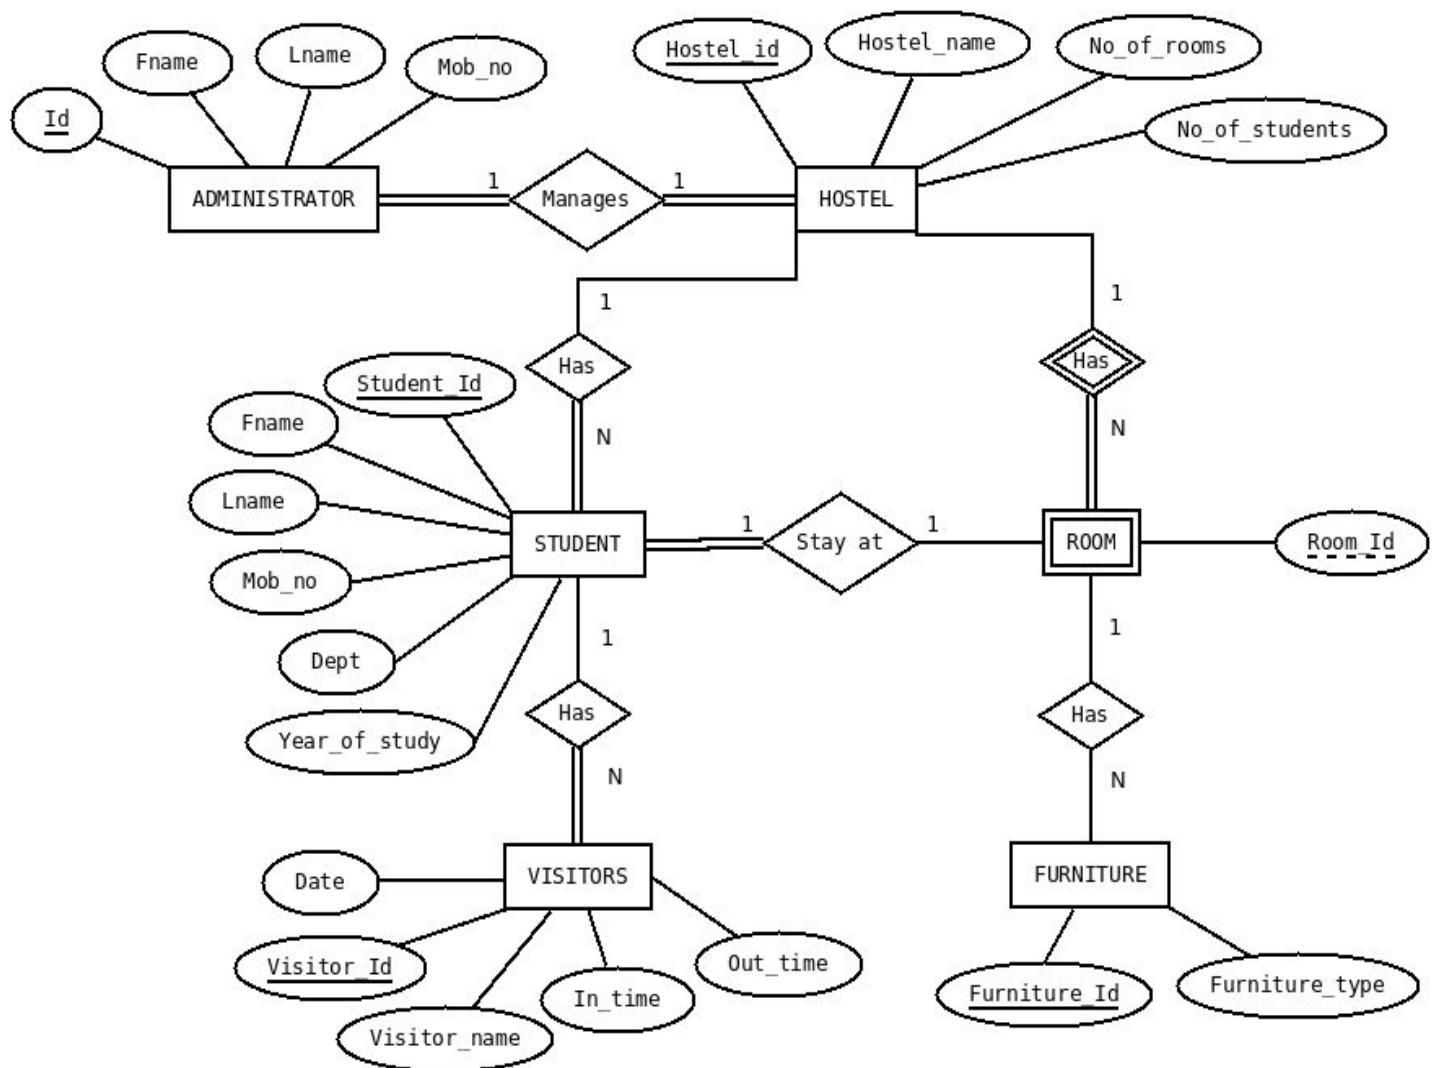

- Hostel Management System is designed for Hostel (like schools, Universities).
- There will be predefined criteria for the Reservation to the hostels.
- He/She checks the attested application forms of the students obtained from the internet and verify it with the student database.
- If the students are found eligible then they are allotted to the hostel Room.

1.4 Overview of Project

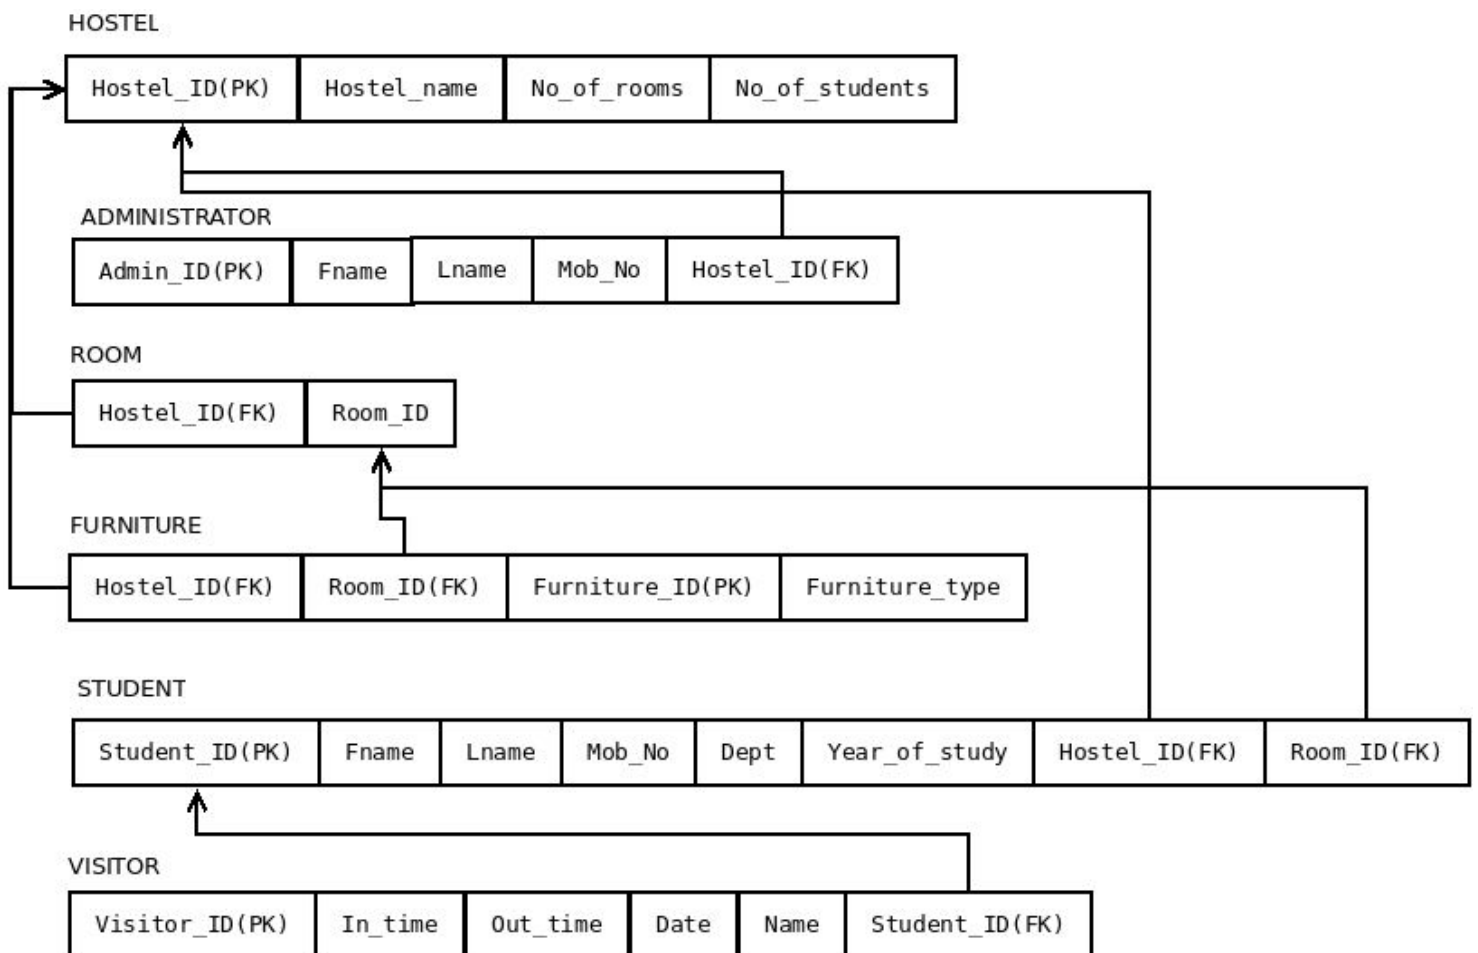

Hostel Room Allocation System is a web application which aims at computerization of the current procedure of allocating hostel rooms. Currently, the process involves students filling up the forms and submitting them in respective hostel offices which involves a lot of paperwork, hence less efficient.

2. Data Design

2.1 Entity Relationship Diagram

2.2 Conceptual Schema

3. Entities and Attributes

This section of the document explains the entities used in the project, their attributes and how they will work together. Basically, this is intended to make the design more easy and understandable for everyone.

Entities

1. Hostel
2. Administrator
3. Student
4. Room
5. Visitor
6. Furniture

3.1 Hostel

An Institution has many hostels and each hostel is represented using this 'Hostel' entity. Hostel model takes part in the following relationships.

1. Administrator manages **Hostel**.
2. **Hostel** has Students.
3. **Hostel** has Rooms.

Attributes

Name	Data Type	Type
Hostel_ID	integer	Primary Key attribute
Hostel_name	string	Non_key attribute
No_of_rooms	integer	Non_key attribute
no_of_students	integer	Non_key attribute

3.2 Administrator

Every hostel has an administrator and is represented using the 'administrator' entity. Administrator entity takes part in following relationships.

1. **Administrator** manages Hostel.

Attributes

Name	Data Type	Type
ID	integer	Primary Key attribute
Fname	string	Non_key attribute
Lname	string	Non_key attribute
Mob_No	string	Non_key attribute
Hostel_id	integer	Foreign Key attribute

3.3 Student

Every hostel has students and they are represented by the 'student' entity. Student entity participates in the following relationships.

1. Hostel has **Students**.
2. **Student** has visitor.
3. **Students** stay at room

Attributes

Name	Data Type	Type
Student_ID	integer	Primary Key attribute
Fname	string	Non_key attribute
Lname	string	Non_key attribute

Mob_No	string	Non_key attribute
Dept	string	Non_key attribute
Year_of_study	integer	Non_key attribute
Hostel_id	integer	Foreign Key attribute
Room_id	integer	Foreign Key attribute

3.4 Room

Every Hostel has rooms and they are represented using 'room' entity. Room entity participates in the following relationships.

1. Hostel has **Rooms**.
2. Student stays at **room**.
3. **Room** has Furniture.

Attributes

Name	Data Type	Type
Hostel_ID	integer	Foreign Key attribute
Room_ID	integer	Partial Key attribute

3.5 Visitors

Every student has visitors and they are represented using 'Visitor' entity. Visitor entity participates in the following relationships.

1. Student has **visitors**.

Attributes

Name	Data Type	Type
Visitor_ID	integer	Primary Key attribute
In time	Date-time field	Non_key attribute

Out time	Date-time field	Non_key attribute
Date	Date-time field	Non_key attribute
Name	string	Non_key attribute
Student_id	integer	Foreign Key attribute

3.6 Furniture

Every room has furniture and they are represented using 'furniture' entity. Furniture participated in following relationships.

1. Room has **Furniture**.

Attributes

Name	Data Type	Type
Furniture_ID	integer	Primary Key attribute
Room_ID	integer	Foreign Key attribute
Hostel_ID	integer	Foreign Key attribute
Furniture_type	string	Non_key attribute
